

ORAL ENGLISH PRESENTATION DIALOGUE

SLIDE 1:

Hello my name is Izan and I'm going to talk about the Falcon 9 rocket.

The Falcon 9 is a rocket made for SpaceX, the principal company in the space sector.

SLIDE 2:

This rocket is the most launched rocket in the world. Currently ONLY this rocket represents more than the forty percent of the rocket launches in the world, we can see a launch of this rocket each two days. And also this rocket is the cheaper rocket that never has existed. You can see that this rocket cost much less than similar rockets in capacities. But, how can be this?

SLIDE 3:

All of this is thanks to the REUSABILITY, this is the ONLY ORBITAL rocket that you can reuse a big part of him. The first stage of this rocket can landing on a platform next to the launch tower or also on a ship platform at sea, to be use about 20 times more. The reusability causes lower prices.

SLIDE 4:

There are some data of the attainments of this rocket in a few years. For example the rocket has been launched more than 340 times, but 92 of this has been the last year, and more than 50 this year.

SLIDE 5:

In addition this rocket is the only rocket in USA than can carry humans to the International Space Station since 2020. From 2011 to 2020 the only nation than could carry humans to the International Space Station was Russia, and the other nations depended of RUSSIA to carry humans to Space up to 2020.

SLIDE 6:

Do you have any questions?

Thanks for your attention, I hope that you liked my presentation
